# Think Or Swim (TOS) – Charting Software

This will be the ONLY software serving as a charting tool for everyone, regardless of your country. The reason is that TOS has advanced indicators unmatched by any other charting platform, and the custom indicators and scanners provided in this discord are exclusively tailored for use with TOS. **Realtime TOS is key** – not paper money. Paper money TOS features delayed data, making it ineffective to learn with as it lacks accuracy. -

# THERE ARE TWO OPTIONS TO GET TOS (see below)

# Option 1: Charles Schwab (Brokerage + Charting)

Charles Schwab (CS) has recently acquired Think or Swim from TD Ameritrade (TDA) and is a global brokerage. This means you can use TOS to confirm your entries and exits and trade (buy and sell US Stocks). The good news is that many countries can now access TOS for free by creating an account with Charles Schwab. **PS. If you hold dual citizenships or IDs for multiple countries, try all of them.** You can visit the following websites to see if your country is eligible to open an account with CS: **For those in the US:** https://www.schwab.com/ **Non-US Residents:** https://international.schwab.com/ **Once you have logged in to your Thinkorswim software for the first time, first you will need to go to Setup in the top right of the application, click Application Settings, then click System & make sure Quote Speed is set to: Real-time (no delay)**

# IF YOUR COUNTRY IS NOT LISTED FOR CHARLES SCHWAB, SEE OPTION 2

# NEXT STEPS:

Head to 🖥️ | tos-small-caps-setup OR 🖥️ | trading-view-indicator-setup-… to import your custom indicator sets

# Option 2: RENT THINKORSWIM

You can now rent TOS from a third party using my referral link to get a discount: https://bit.ly/3BHrWEr **Exclusive Prices for YBI members** 1 month - $39.99 8 months - $299 Lifetime - $359 **TOS is the only charting software I recommend. No other charting software compares. If you want to be a serious, professional trader, TOS is what you need to be using. You will have access to my scanners, custom coded candles and autoplotted S/R**

# Option 3: Trading View

**This charting software is free and is ONLY recommended if you can't get TOS. If you can get Think or Swim, please do.** The custom scanners provided are for TOS as well as the scanners- this is the best charting software for anyone who wants to become an independent trader. You can also use trading view with the alerts. Your indicators simply confirm your entries and exits based on the alerts provided in 🔔 | alerts-intraday so this option does work.
